LEADERSHIP

Successfully led and managed multiple projects within the organization, overseeing a team of developers, designers, and other professionals. Provided guidance, support, and motivation to ensure project success.

Acted as a key client liaison, attending meetings and maintaining strong client relationships. Mentored junior developers, fostering their professional growth and skills development.

Successfully resolved conflicts and challenges during project execution. Made critical decisions regarding project architecture, technology stack, and development approach, contributing to the successful delivery of high-quality solutions.

PROJECTS

Online Certificate Management System of KIIT DEEMED To Be University – PHP/Codeigniter
Applying and receiving the Certificates over the Internet without the need to go physically to the university is what our website defines. Receiving a certificate is just like going to the university, but it is done through the university website.

To develop an easy-to-use university website where students can apply for forms (Transcript, Certificates, Grade Report).

Arduino-Based Home Automation – Android Studio, PHP, MySql, Firebase
Developed an Arduino-based home automation system using Android Studio, PHP, MySQL, and Firebase, enabling users to remotely control home appliances such as lights, AC, and TV. The system also provides real-time status updates, allowing users to monitor the operational state of specific rooms within their homes. My key role involved managing the backend database using PHP and MySQL, as well as implementing user login and authentication through Firebase. The collaborative effort of a five-member development team resulted in an innovative and user-friendly home automation solution.
